

PERTUSSIS OR (WHOOPIING COUGH)

IS SPREADING IN OUR COMMUNITY

**"CREATE A CIRCLE OF PROTECTION FOR YOUR BABY"
BY GETTING VACCINATED AGAINST PERTUSSIS**

Pertussis (whooping cough) is a very serious disease for babies. Babies can catch the illness from adults and older children.

Most infants who get Pertussis must be hospitalized. It is easily spread, and can cause serious illness and even death.

Call us to learn more about the booster shot (Tdap) that's recommended for parents, older children, and other adults, including grandparents and babysitters.

The New Haven Health Department is offering the vaccination for FREE

Call the New Haven Health Department at 203 946-7257

Clinic hours are Tuesday from 9 to 11 AM.

54 Meadow Street • New Haven • Connecticut 06519
